Ice Shields

Ice Shields are designed to protect parabolic or high performance dishes up to 15' in diameter, or their transmission lines from falling ice. Depending on the shield and site requirements, they are capable of attaching up to 4½" OD rounds or 4" angles with the standard attachment hardware. Long 12' universal tie-backs are provided to better orientate and stabilize the ice shield above the dish.

Ice shields typically require various sized standoffs to fully cover the accompanying dish. With this in mind, Trylon TSF has matched each ice shield with appropriately sized standoffs and backing hardware to accommodate almost any tower leg size. Call us for more details, or see pages 4 to 7 for typical standoffs.

All material is hot dip galvanized.
