

## Antenna Mounts

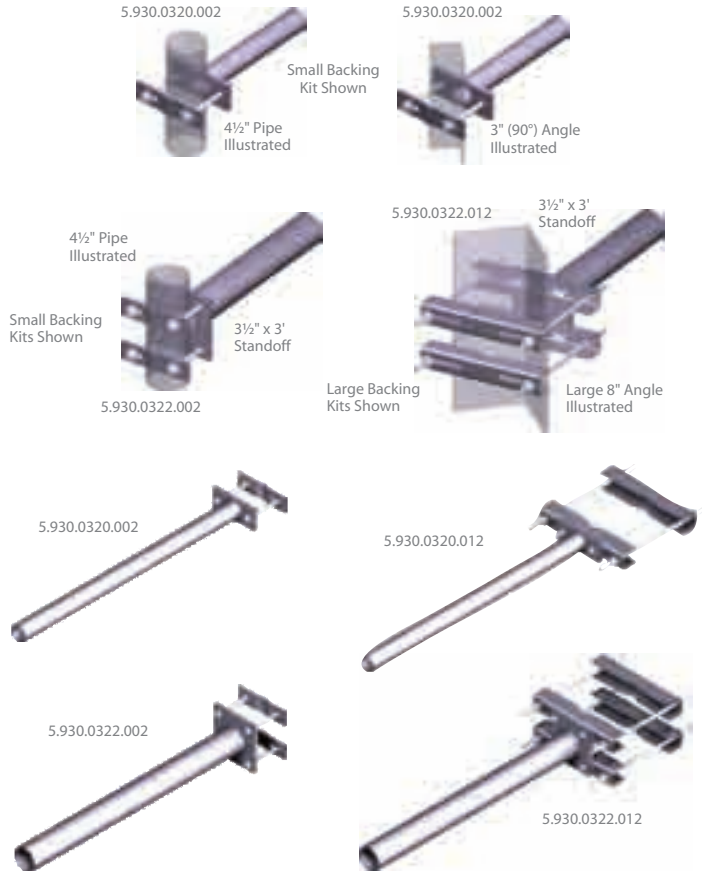

### Single Arm Standoffs

Single Arm Standoffs are the perfect solution for flexible tower offsets. As a stand-alone standoff, they provide a unique offset for mounting vertical antenna pipes. As a group of two or four, they provide a sturdy and robust support system for multiple antennas or face mounted sector frames.

Since they are independent of each other, vertical or tapered legs are not a factor and are easily accommodated. With the correct backing kits, they can attach to round tower legs up to 11" OD in size, or angle legs up to 8" in size (60° or 90°).

Four options are available; the smaller 2 3/8" pipe with 24" or 36" long offsets, or the larger 3 1/2" pipe with 24" or 36" long offsets. The application and site specific loading will govern which standoff is required.

All material is hot dip galvanized for maximum corrosion protection.
