

## Antenna Mounts

### Tie-Back Assemblies

Tie-back Assemblies are commonly used to stabilize antennas and maintain critical azimuth orientation. They are highly recommended with any antenna mount that has a large antenna or separation, and in high wind or heavy ice conditions.

An assortment of 2 3/8" OD tie-backs are offered that meet almost any field application. The two key factors in determining the

correct tie-back assembly are the overall length required and the attachments at either end. If neither is known, the large universal option is the best choice.

All material is hot dip galvanized for maximum corrosion protection.
